

Check out the latest research conducted by ARCCA's Accident Reconstruction group in Collision Magazine!

ARCCA's team of accident reconstruction experts remain on the cutting edge of industry trends by participating in ongoing testing and research into new and developing technologies. A growing area of interest has been the emerging category of advanced vehicle data accessible in modern cars. Led by accident reconstruction expert Joseph Teitelman, our recent research efforts have culminated in an article titled "Toyota Vehicle Control History: 'Sudden Braking History' Recording Characteristics", which has been published in the new issue of Collision Magazine. The article focuses on a new and exciting data recording functionality which is specific to Toyota and Lexus brand vehicles.

Want to Learn More about advance vehicle data? Check out the article at <https://www.collisionmagazine.com> or reach out to us directly.
